Abstracts

CO2 RF Metal Laser is one of the fastest-growing technologies in the industrial laser market in recent years and is considered to be the best alternative to glass tube sealed CO2 laser. It adopts a fully metalized structure and has the characteristics of small size, full enclosure, compact device, sealed operation, maintenance-free, low cost of use, excellent modulation characteristics, high output beam quality (more than 3 times finer than glass tube), high injection power density, low operating voltage, convenient and adjustable output power, excellent power stability, high operational reliability, etc. More importantly, CO2 radio frequency metal laser also has the advantages of long service life (generally more than 20,000 hours), low maintenance cost, and can be reused after inflation without replacement. In addition, among all kinds of industrial lasers, CO2 laser has the lowest output cost per watt and high plug efficiency, between 10% and 12%. Its applications include high-speed cutting, engraving, welding, etc. of flexible materials, non-metallic solid materials and metal materials. These advantages make CO2 radio frequency metal laser very suitable for industrial continuous production.

The global CO2 RF Metal Laser market size was estimated at USD 833.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.60% during the forecast period.
