Abstracts

Coagulants and flocculants are chemicals used to remove suspended solids from water and wastewater. Coagulants neutralize the static charge of the particles and make them clump together into small flocs. Flocculants enhance the floc formation and increase the floc sizes so that they can be more easily separated from the liquid phase. Coagulation and flocculation are essential parts of water treatment for reducing turbidity and organic loads.

The global Coagulants And Flocculants For Water Treatment market size was estimated at USD 8500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
