Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Coal Based Granular Activated Carbon competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Coal-based granular activated carbon (GAC) is a highly porous adsorbent material derived from selected grades of bituminous or anthracite coal, which is processed through carbonization and activation techniques such as steam or chemical activation. This results in a rigid, granular structure with a vast internal surface area, ideal for trapping organic compounds, chlorine, chloramines, volatile organic compounds (VOCs), and certain heavy metals. Coal-based GAC is widely used in water and wastewater treatment, air purification, food and beverage processing, industrial gas cleaning, and gold recovery due to its excellent mechanical strength, broad pore distribution, and cost-effectiveness. Its granular form allows it to be packed into columns and filtration beds, making it suitable for both fixed and moving bed applications where continuous filtration or regeneration is required.

The global Coal Based Granular Activated Carbon market size was estimated at USD 1726.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
