Abstracts

Coal electric detonators are specialized initiation devices used in mining operations, designed to safely and reliably ignite explosive charges in coal seams through an electrical impulse, with critical safety features to prevent accidental detonation from stray currents or static electricity in potentially methane-rich environments. These devices are integral to controlled blasting in both surface and underground coal mining, ensuring precise timing for rock fragmentation while minimizing risks of premature explosions or misfires, and they typically consist of a bridgewire embedded in a primary explosive charge housed within a robust, often waterproof casing rated for specific electrical resistance and operational conditions.

The global Coal Electric Detonators market size was estimated at USD 1550.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
