Abstracts

The coal mill separator is one of the key equipment in the coal powder preparation system. It is mainly used to separate the coal powder from the coarse particles to ensure that the fineness of the coal powder meets the standard required for boiler combustion. It separates the coal powder from the larger particles through the principle of rotating wind or centrifugal force. The finer coal powder is sent to the downstream system, and the larger particles are returned to the coal mill for further grinding. The working efficiency of the coal mill separator directly affects the quality of the coal powder, the combustion efficiency of the boiler, and the level of pollutant emissions.

The global Coal Mill Separator market size was estimated at USD 509.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
