Abstracts

Coal packaged explosives are specialized industrial explosives designed specifically for mining operations, particularly in coal extraction, where safety requirements are stringent due to the presence of flammable gases and coal dust. These explosives are engineered to minimize the risk of accidental ignition while ensuring efficient fragmentation of coal seams, and they typically come in pre-packaged, standardized units for ease of handling, transportation, and deployment in both surface and underground mining environments. Key characteristics include controlled velocity, reduced fumes, and compliance with industry safety standards to prevent methane or coal dust explosions, making them distinct from general-purpose explosives used in other types of rock blasting.

The global Coal Packaged Explosives market size was estimated at USD 3850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
