Abstracts

Coarse yarn refers to yarn with a low linear density, meaning it has a larger diameter and fewer yards per pound (or meter per kilogram) compared to finer yarns. It's typically categorized as yarn with a count of 18 or lower in the English cotton count system (Ne). Coarse yarns are often used for creating thicker, heavier fabrics with a more textured appearance. They are suitable for applications like towels, blankets, carpets, and some types of outerwear. Due to its bulkier nature, coarse yarn can provide warmth and durability, making it ideal for items requiring substantial structure. The coarse yarn industry is experiencing a complex interplay of factors influencing its trends. While coarse yarns remain essential for specific applications requiring bulk and durability, the overall market is facing competition from finer yarns and alternative materials. The trend towards lighter-weight clothing and more refined fabrics has somewhat reduced the demand for purely coarse yarn fabrics in certain apparel categories. However, there's a resurgence of interest in handcrafted and artisanal textiles, where the texture and character of coarse yarns are appreciated. This has led to niche markets for specialty coarse yarns, including those made from natural fibers like wool and organic cotton. Furthermore, the home decor sector continues to utilize coarse yarns for items like rugs, blankets, and upholstery, where their durability and visual appeal are valued. The industry is adapting by focusing on innovation, developing new blends and spinning techniques to create coarse yarns with improved softness, drape, and other desirable characteristics. Sustainability is also a key concern, with manufacturers exploring eco-friendly dyeing and finishing processes for coarse yarns. The future of the coarse yarn industry likely involves a combination of niche market growth, product innovation, and a greater emphasis on sustainable practices.

The global Coarse Yarn market size was estimated at USD 7105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the

forecast period.
