Abstracts

A coated busbar is an electrical conductor that has been covered with a protective or functional coating. It is usually made of copper, aluminum or other conductive materials, and the coating is applied to the surface of the busbar to provide various advantages. The coating can be an insulating layer, such as a polymer-based insulator, which is used to prevent electrical leakage and short circuits, improve the safety and reliability of the electrical system. It can also be an anti-corrosion coating, like a zinc or nickel plating layer, which protects the busbar from environmental corrosion and extends its service life. In addition, some coatings are designed to have special functions, such as heat dissipation coatings that help to dissipate the heat generated during the operation of the busbar, or low-friction coatings that facilitate the installation and handling of the busbar.
