Abstracts

Coated recycled boards refer to paperboard products manufactured from post-consumer or post-industrial waste paper that has been processed, de-inked, and reformed, then finished with one or more layers of coating?such as clay, calcium carbonate, or polymers?to enhance surface smoothness, brightness, printability, and durability. These boards are engineered to meet performance standards comparable to those of virgin fiber boards while offering significant environmental advantages, including reduced resource consumption, lower carbon emissions, and alignment with circular economy principles. They are widely utilized in packaging applications?such as folding cartons, beverage carriers, and cosmetic boxes?as well as in graphic arts and printing, where high-quality surface finish and eco-friendly credentials are increasingly demanded by brands and consumers.

The global Coated Recycled Boards market size was estimated at USD 3200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
