Abstracts

Coated separators are a widely used thin film material that are often coated on a variety of substrates to achieve different functions and properties. These separators can be used in many fields, such as optics, electronics, lighting, solar energy, medical, etc. As environmental awareness increases, manufacturers will seek to develop more environmentally friendly coating materials and processes, reduce the use of harmful chemicals, and optimize production processes to reduce waste. Coated separators of the future may become more versatile, with one film providing multiple properties. This will reduce material usage, reduce costs, and simplify product design. Nanotechnology will play an important role in coating separators. By using nanoparticles or structures, the properties of the separator can be improved, such as increasing optical transmittance or increasing the hardness of the coating.
