## Abstracts

Coating durability testing refers to the evaluation and assessment of the long-term performance, resistance, and stability of protective coatings applied to various surfaces, such as metals, polymers, or concrete. The purpose of these tests is to simulate and predict how coatings will withstand environmental conditions, exposure to chemicals, temperature variations, abrasion, and other factors over an extended period. Testing standards, such as those established by organizations like ASTM International, are periodically updated to reflect advances in materials science and testing methodologies. Look for trends in the development of new or revised standards for coating durability testing.

The global Coating Durability Testing market size was estimated at USD 6699.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
