Report Overview:

Pretreatment coating is a process that conditions metal surfaces to be more rust resistant before painting process. Pretreatment coatings are materials that minimize wear & tear, corrosion, increase thermal stability, and enhance aesthetics. The process is important before painting or powder coating to get rid of surface contaminants that would cause your paint or powder coat to not adhere properly. Pretreating creates a surface that the coating can adhere to, whether the coating is liquid or powder, and increases the performance value of a coating, increasing its life and helping to prevent corrosion.
