Abstracts

Coaxial Dual Junction Isolator is a key device used in microwave and millimeter-wave systems. It has two magnetic junctions and is capable of achieving unidirectional signal transmission while isolating the reverse transmission signal. This type of isolator typically employs magnetic materials to absorb and convert the magnetic field energy of the reflected signal, converting it into thermal energy for dissipation, thereby preventing the reflected signal from interfering with the system. It is widely used in microwave communication, radar systems, satellite communication and other fields, featuring high isolation, low insertion loss, wide frequency range and high power handling capacity.

The global Coaxial Dual Junction Isolator market size was estimated at USD 180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
