## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Coaxial Light Source for Machine Vision competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A coaxial light source for machine vision is a specialized illumination device that uses a half mirror or beam splitter to direct light along the same optical axis as the camera, providing vertical and uniform lighting to the target surface. This configuration allows the camera and the light source to share the same viewing axis, making it ideal for inspecting reflective or structured surfaces such as PCBs, metal parts, glass, barcodes, or fine scratches. Coaxial lighting eliminates shadows and reduces glare caused by side lighting, significantly enhancing image contrast and inspection accuracy in precision vision applications.
