Abstracts

A coaxial multi-rotor drone refers to a drone equipped with two or more sets of rotors on the same axis, with these rotors spinning in opposite directions. The counter-rotation of the upper and lower rotors effectively cancels out torque, enabling the drone to maintain stable flight without the need for a tail rotor to balance torque, as is required in traditional single-rotor helicopters. This design simplifies the drone's structure, enhances flight stability and control precision, providing it with unique advantages across various application scenarios.

The global Coaxial Multi-rotor Drones market size was estimated at USD 674.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
