Abstracts

A coaxial octo-rotor drone is a specific type of multi-rotor drone featuring eight rotors, with every two rotors forming a coaxial pair. Each coaxial set of rotors spins in opposite directions, effectively canceling out the torque generated by the rotor rotation. This allows the drone to maintain stable flight without the need for additional devices such as a tail rotor to balance torque. By adjusting the rotation speed of each rotor, the drone can achieve various flight attitudes, including ascending, descending, hovering, moving forward, moving backward, and turning.

The global Coaxial Octo-rotor Drones market size was estimated at USD 580.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
