Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Coaxial Phase Shifter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of coaxial phase shifters reached 580,000 units, with an average selling price of \$820. Coaxial phase shifters are passive devices that utilize transmission line structures to precisely adjust the phase of RF and microwave signals. They are widely used in radar, satellite communications, phased array antennas, and 5G/6G base station systems. Their upstream raw materials primarily include high-frequency coaxial cables, dielectric substrates (metal oxide ceramics, polytetrafluoroethylene), precision metal parts (copper, stainless steel), and connectors. Representative companies include Mitsubishi Electric, Sumitomo Electric Industries, Henkel Precision Metals, and PTFE suppliers such as Asahi Kasei. Downstream applications are primarily concentrated in system integrators and communications equipment manufacturers such as Raytheon Technologies, Lockheed Martin, Huawei, ZTE, and Nokia. Future development of this product is focused on supporting higher frequency bands (millimeter wave), miniaturization, low insertion loss, and high power handling capabilities. It will be deeply integrated with phased array radar and 6G communications, becoming a key component in the next generation of high-frequency communications and defense electronics systems.

The global Coaxial Phase Shifter market size was estimated at USD 476.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
