Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on COB LED Strip Light competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global COB LED Strip Light production reached approximately 13,124,000 km, with an average global market price of around US\$ 25 per meter. COB (Chip on Board) LED Strip Light is an advanced type of flexible lighting solution in which multiple LED chips are directly mounted onto a circuit board to form a continuous, high-density light-emitting surface. Unlike traditional SMD (Surface-Mounted Device) LED strips that feature visible light points, COB strips provide a seamless, uniform line of light without noticeable dots or dark spots, making them highly desirable for professional-grade lighting applications. The technology involves encapsulating numerous small LED chips closely together on the substrate and covering them with a phosphor coating, which diffuses the light and enhances color uniformity. This construction not only improves luminous efficiency but also enables excellent thermal management, resulting in better heat dissipation, higher stability, and a longer lifespan compared to conventional strip lights. COB LED strips are known for their flexibility, slim design, and ability to deliver high brightness while maintaining consistent color rendering, making them ideal for environments that demand both functional and aesthetic lighting. Their energy efficiency, combined with smooth dimming performance, makes them widely used in residential, commercial, and industrial spaces.

The global COB LED Strip Light market size was estimated at USD 328.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
