Report Overview

Cobalt-60 (Co-60) is a radioactive isotope of cobalt produced by irradiating stable cobalt-59 in nuclear reactors, primarily used in industrial and medical applications due to its high-energy gamma radiation. In the medical sector, it serves as a critical source for radiotherapy in cancer treatment and sterilization of medical equipment. Industrially, it is employed in non-destructive testing (NDT) for material inspection, food irradiation for preservation, and polymer modification. The market is driven by increasing demand for cancer treatment solutions, stringent sterilization requirements in healthcare, and expanding applications in food safety and industrial processes. However, supply constraints due to limited production facilities, geopolitical factors, and regulatory hurdles pose challenges, alongside competition from alternative technologies like linear accelerators in radiotherapy and electron beam sterilization. Key producers include government-backed entities and specialized nuclear companies, with North America, Europe, and Asia-Pacific being major demand hubs. Growth is further influenced by advancements in nuclear technology and rising healthcare investments in emerging economies.

The global Cobalt 60 Source market size was estimated at USD 1271.9 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
