The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cobalt Titanate Green competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cobalt titanate green is an inorganic pigment composed primarily of cobalt and titanium oxides, known for its excellent thermal stability, chemical resistance, and vibrant green-blue hue. It belongs to the class of complex inorganic color pigments (CICPs), specifically a spinel-type structure, which provides strong durability and weather resistance, making it ideal for applications in ceramics, glass enamels, high-temperature coatings, plastics, and industrial paints.
