Report Overview

Coco-Caprylate/Caprate is a straight, unbranched wax ester made of C12-C18 coconut fatty alcohol and a defined blend of fractionated fatty acids of vegetable origin. A non-oily character and excellent compatibility make it the right choice for a wide range of personal care and cosmetic applications especially for replacing Silicone oils while maintaining their elegant light skin feel. It is considered a true vegetable alternative for light petrochemical based emollients like IPM, mineral oils or silicones (e.g. D5). Coco-Caprylate/Caprate is one of the fastest spreading natural emollients. It decreases heavy and greasy skin feel of slow spreading oils and will benefit the formulation with a long-lasting care effect. It can be easily incorporated in emulsion formulations by simply adding it to the oil phase in hot or cold processes. The pH value of the final formulation should range between pH 4 and 8.
