Abstracts

Cocoa butter for edible oils refers specifically to the fat extracted from cocoa beans that is intended for use within the broader food and beverage industry, primarily as a key ingredient in confectionery, particularly chocolate and compound coatings, but also in baked goods, ice cream, and some premium margarines. It is distinct from cosmetic-grade cocoa butter due to its refined edible quality standards, and it is valued for its unique melting properties, sharp melting point near body temperature, and its role in providing the characteristic mouthfeel, snap, and gloss in finished chocolate products. As a natural fat, it is often used in formulations requiring specific crystallization behavior (notably in tempering) and is sometimes blended with other vegetable oils or used as a replacement for more expensive or less functional fats in high-value applications.

The global Cocoa Butter For Edible Oils market size was estimated at USD 4850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
