## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cocoalkyl Amine Ethoxylate Ether competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of cocoalkyl amine ethoxylate ether is 32,700 tons, with an average price of US\$4,500 per ton. Cocoalkyl Amine Ethoxylate Ether is a specialized nonionic surfactant derived from coconut fatty amines. It is synthesized through a multi-step process involving ethoxylation and etherification of cocoalkyl amines, which are obtained from coconut oil-based fatty acids. As an important nonionic surfactant, cocoalkyl amine ethylene ether is widely used in industrial cleaning, personal care, and textile treatment applications due to its excellent emulsifying, dispersing, wetting, and antistatic properties. Its molecular structure combines both hydrophilic and hydrophobic properties, allowing it to form micelles at interfaces and effectively reduce surface tension, making it an indispensable additive in various industrial processes. Current market demand is continuing to grow, particularly amidst rising environmental awareness and the rise of green chemistry.

Polyoxyethylene ether products are highly sought after for their excellent biodegradability and environmental performance. Growth is primarily driven by increasing demand for environmentally friendly surfactants in downstream industries, as well as improvements in production efficiency and product quality driven by technological advancements. The market's shift towards high-end and customized products is key to enhancing companies' competitiveness. As consumers demand higher performance and environmental friendliness, companies are demanding customized solutions for diverse applications, including textiles, laundry detergents, cosmetics, and pharmaceuticals. For example, COAPE is used as a softener and antistatic agent in the textile industry, a key ingredient in laundry detergents and

detergents in the laundry industry, and an emulsifier, stabilizer, and solvent in the cosmetics and pharmaceutical industries. Emerging sectors such as biotechnology and healthcare are also providing new growth opportunities for polyoxyethylene ether applications. In terms of the supply chain, the upstream production of coconut alkylamine polyoxyethylene ether primarily relies on chemical raw materials such as ethylene oxide, ethylene glycol, and coconut amine. Ethylene oxide, a core raw material, enjoys a relatively stable market supply, but its price is significantly affected by fluctuations in crude oil prices, which in turn impacts ethylene glycol prices. Raw material costs account for approximately 30% of total production costs, requiring suppliers to possess a significant production scale, a strong market reputation, and stable logistics and distribution capabilities. Companies typically manage these fluctuations through decentralized procurement, futures trading to lock in prices, and establishing price warning mechanisms. In the midstream production sector, Chinese companies are enhancing their competitiveness through technological innovation and economies of scale. While production technology is relatively mature, precise control of molecular structure, improved environmental performance, and storage and transportation stability remain key technical challenges. Manufacturers must precisely control polymerization reaction conditions, such as temperature, pressure, and catalyst concentration, and employ membrane separation and centrifugation techniques to purify the product. At the same time, environmental pressure is prompting companies to adopt clean production technologies, such as closed-loop reaction systems to reduce volatile organic compound emissions, and advanced wastewater treatment and exhaust gas purification equipment to ensure compliance with emission standards. Downstream sales channels include both online and offline channels. Companies expand their market share by participating in industry exhibitions, establishing sales networks, and building long-term partnerships with downstream companies. They focus not only on the domestic market but also actively explore international markets, developing sales strategies tailored to the specific characteristics of each region. Product packaging is commonly found in 25kg or 200kg drums for easy transportation and storage.

The global Cocoalkyl Amine Ethoxylate Ether market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
