The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on COEX Tube Packaging competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. COEX Tube Packaging is a type of multilayer plastic tube designed to provide enhanced protection, durability, and barrier properties for a wide range of products. By combining different layers of polymers, this packaging ensures that contents such as cosmetics, pharmaceuticals, and personal care items are shielded from external factors like moisture, oxygen, and light, thereby preserving product quality and extending shelf life. The structure also allows for flexibility, lightweight handling, and easy decoration, making COEX tubes both functional and attractive for brand presentation. Their adaptability to various filling processes and compatibility with diverse product formulations make them a preferred solution in industries that prioritize safety, performance, and consumer convenience. The supply chain of COEX Tube Packaging is closely integrated with the processing and application of multilayer composite technology. The upstream sector primarily comprises the petrochemical industry, supplying high-barrier resin raw materials such as polyethylene, polypropylene, and EVOH, as well as pigments and additives. The core manufacturing process involves the production of flexible tubes using co-extrusion blow molding technology, incorporating multiple materials and performing further processing such as tube printing and cap assembly. The technological barriers lie in material formulation, interlayer bonding, and precision control. Downstream, the company connects with a wide range of end-user brands in the cosmetics, pharmaceutical, and food industries, meeting their needs for product sealing, product presentation, and competitive differentiation. This supply chain is driven by basic chemical raw materials, with value concentrated in the midstream manufacturers possessing advanced processing capabilities and customized service

advantages, ultimately serving the market segment that prioritizes brand value and consumer experience. When orders reach several thousand units, the unit price for COEX Tube Packaging products is approximately \$0.06 to \$0.10, with a gross profit margin of 20% to 35% and a capacity utilization rate of 65% to 85%.

The global COEX Tube Packaging market size was estimated at USD 139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
