## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Coil Grout competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Coil Grout is a refractory and insulating material specifically designed to protect the induction coils of coreless induction furnaces (especially medium-frequency furnaces). It is typically made by premixing white corundum sand and powder as the main matrix with the addition of composite additives, and features high strength, high density, and high insulation. Its upstream mainly relies on refractory raw materials such as alumina and silica, as well as binders. Downstream, it is widely used in the casting industry, especially in the metal smelting process using induction furnaces (such as medium-frequency furnaces), with end-user demand spanning multiple sectors including steel and non-ferrous metal processing. Global sales in 2024 were approximately 58,000 tons, with an average market price of approximately US\$950 per ton. The scale of single-line production capacity varies depending on production processes and investment scale. The industry's gross profit margin ranges from 15% to 30%.

The global Coil Grout market size was estimated at USD 55.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
