## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cold Cathode X-ray Tubes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cold cathode X-ray tube is an X-ray generator based on the principle of field emission. Its core structure consists of a carbon nanotube (CNT) cathode, an anode target material, and a vacuum-sealed housing. Unlike traditional hot cathode X-ray tubes, cold cathodes do not require filament heating. Instead, they directly extract electrons from the tips of carbon nanotubes using a strong electric field ( $10^{10}$  V/m), which then bombard the anode target to generate X-rays. Key technical features include: Material innovation: Utilizing high-purity few-walled carbon nanotubes (purity  $\geq 99.5\%$ ) as the emitter, achieved through chemical vapor deposition (CVD) to enable high-density vertical growth, ensuring uniform electron emission. Structural design: Multi-focus array arrangement (e.g., integrating hundreds of foci within a single chamber) and adjustable focusing electrode technology enable dynamic adjustment of X-ray intensity and focal spot size, with focal spot precision reaching the submicron level. Performance advantages: Instantaneous response: Microsecond-level pulse emission (50mA). Integrated Design: Meter-long cold cathode distributed X-ray tubes (with a voltage rating of 200kV) and intelligent control systems support continuous operation at 4kW, with resolution improved to the submillimeter level. Semiconductor Applications: Medical ultra-fast CT equipment developed by Tsinghua University and Xinhong Electronics reduces scanning time to 10 milliseconds, enabling detection of submillimeter-level vascular lesions.

The global Cold Cathode X-ray Tubes market size was estimated at USD 68.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 37.30%

during the forecast period.
