The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cold Chain Stereoscopic Warehouse competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A cold chain stereoscopic warehouse is an automated warehousing system specifically used for the storage of refrigerated and frozen materials. It is usually built as a high-rise stereoscopic structure, equipped with stackers or multi-pass shuttle vehicles to achieve precise zoning management of multiple temperature zones (such as 0-4°C, -18°C, -60°C, etc.). Compared with traditional cold storage, the cold chain stereoscopic warehouse has greatly improved space utilization, storage and access efficiency, and cold chain stability through highly integrated logistics equipment and intelligent control software systems (such as WMS warehouse management system, WCS equipment control system), and effectively avoided temperature fluctuations, cross contamination and energy waste caused by human operations. It is widely used in meat processing, dairy distribution, aquatic storage, biological vaccine refrigeration, central kitchens and other fields, and is a core component of modern food safety and cold chain logistics systems.
