Report Overview:

Cold compression therapy combines two elements of the first aid technique, RICE (Rest, Ice, Compression, Elevation); active pneumatic compression with cryotherapy (also referred to as cold therapy). Cold compression therapy works by distributing alternating pressure (this removes edema and reduces swelling which can be eliminated by the lymphatic system). Also, the improved circulation with the intermittent pressure promotes and accelerates tissue healing and tissue quality. Additionally, the decrease in temperature reduces pain by constricting blood flow to the injury.

The Global Cold Compression Devices Market Size was estimated at USD 159.68 million in 2023 and is projected to reach USD 209.14 million by 2029, exhibiting a CAGR of 4.60% during the forecast period.
