Report Overview

Cold field emission electron microscope (CFE-SEM or FE-SEM for short) is an advanced electron microscope technology. Cold field emission electron microscope uses cold field emission technology to generate high-energy electron beams, which scan the sample surface after focusing and accelerating. During the scanning process, the electron beam interacts with the sample surface to stimulate various physical signals, such as secondary electrons, backscattered electrons, characteristic X-rays, etc. By collecting and processing these signals, high-resolution images and microstructural information of the sample surface can be obtained.
