Abstracts

Cold gas spray coating, also known as cold spray additive manufacturing or kinetic spraying, is a solid-state material deposition technology that accelerates fine powder particles to supersonic velocities using a compressed gas stream (typically helium, nitrogen, or air) at temperatures well below the melting point of the material, causing them to plastically deform and bond upon impact with a substrate to form a dense, low-porosity coating or freestanding structure without significant thermal degradation, oxidation, or phase changes, making it particularly advantageous for repairing sensitive components, applying corrosion-resistant or wear-resistant layers, and adding conductive or functional coatings to temperature-sensitive substrates in industries such as aerospace, automotive, electronics, and energy.

The global Cold Gas Spray Coating market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
