Abstracts

A Cold Hammer Forged Barrel is a type of firearm barrel that is manufactured through a specialized forging process known as cold hammer forging. In this process, a solid billet of metal, typically steel, is placed inside a die and subjected to repeated hammering or high-pressure impacts by a series of mechanical hammers. This cold working of the metal gradually shapes the billet into the form of a barrel, resulting in a highly precise and durable component. The cold hammer forging process imparts several advantages to the barrel, including enhanced strength, improved dimensional accuracy, and a refined internal structure that can contribute to better ballistic performance and greater resistance to wear and tear, making it a favored choice in the production of high-quality firearms.

The global Cold Hammer Forged Barrel market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
