Abstracts

Cold Liquid Applied Membrane System is a type of waterproofing solution that involves the application of a liquid material, typically a polymer-based compound, directly onto a substrate without the need for heating or melting. The liquid is applied using a roller, brush, or spray, and it cures to form a seamless, flexible, and durable membrane. These systems are commonly used in construction and roofing to protect structures against water infiltration and environmental damage. Their ease of application, ability to conform to complex shapes, and lack of hazardous fumes make them a popular choice for both new builds and repairs.

The global Cold Liquid Applied Membrane System market size was estimated at USD 1670.33 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
