## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cold Pressed Citrus Essential Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global cold-pressed citrus essential oil production reached 79,200 tons in 2024, with an average selling price of US\$12,153 per ton. Cold-pressed citrus essential oil refers to volatile aromatic compounds obtained by mechanically puncturing or squeezing the oil sac cells on the surface of citrus peel at room temperature, releasing the essential oil. The oil is then extracted through a series of physical steps, including water spraying, filtration, and centrifugation. No external heat or chemical solvents are introduced throughout the process, maximizing the retention of heat-sensitive components such as terpenes and aldehydes, resulting in an aroma that most closely resembles fresh fruit. Rutaceae fruit trees, such as sweet oranges, lemons, mandarins, tangerines, pomeloes, and limes, are primarily produced in the Mediterranean (Sicily and Spain), the Americas (Brazil, Florida/California), and China (Hunan, Jiangxi, Chongqing, and Fujian). Industry Characteristics By-product Economy: Essential oils are valuable but produced in small quantities, with juice still the primary source of revenue. Essential oil processing relies on the presence of large-scale juice factories. Technical Barriers: Low-temperature centrifugation and deterpening determine aroma quality and stability; organic raw materials control pesticide residues. Regional agglomeration: The processing base is located close to the advantageous citrus production area to reduce the transportation cost of the peel and pulp and ensure freshness.

The global Cold Pressed Citrus Essential Oil market size was estimated at USD 964.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

6.90% during the forecast period.
