## Abstracts

A cold-pressed slow juicer, also known as a slow masticating juicer, is a type of juicing machine designed to extract juice from fruits, vegetables, and other ingredients using a gentle and slow process. Unlike traditional centrifugal juicers that operate at high speeds, cold-pressed slow juicers use a slower, grinding and pressing mechanism to extract juice. This method is believed to help preserve the nutritional value and flavor of the extracted juice. The core component of a slow juicer is an auger or screw that rotates slowly (typically around 40 to 80 RPM). This auger crushes and grinds the ingredients, breaking down the cellular structure and releasing the juice.

The global Cold Pressed Slow Juicer market size was estimated at USD 957.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
