### Report Overview:

A cold recycler is a machine used in road construction or maintenance work that reuses asphalt materials on site. It pulverizes old pavement into smaller pieces, which can then be mixed with new aggregate and liquid asphalt to produce fresh hot mix asphalt. This process reduces waste and eliminates the need for transporting the material offsite for disposal or reuse elsewhere. By using a cold recycler, contractors can save money on transportation and disposal costs and reduce environmental impact from truck exhaust emissions associated with hauling materials over longer distances. Overall, incorporating cold recycling technology offers practical benefits for both the environment and budget in managing highway infrastructure improvements.

The Global Cold Recycler Market Size was estimated at USD 581.20 million in 2023 and is projected to reach USD 774.42 million by 2029, exhibiting a CAGR of 4.90% during the forecast period.
