Abstracts

Cold rolled sheet steel refers to a specific type of steel product manufactured through a multi-stage process that begins with hot-rolled steel being pickled to remove scale, then passed through rollers at room temperature to achieve precise dimensional tolerances, a smooth surface finish, and improved mechanical properties such as higher strength and hardness. This cold reduction process allows for greater control over the final product's characteristics, making it suitable for applications where surface quality, uniformity, and formability are critical. Commonly available in coils or cut-to-length sheets, cold rolled sheet steel is widely used in automotive body panels, appliances, furniture, construction components, and various industrial products requiring a high-quality aesthetic or functional surface.
