Abstracts

Cold-rolled middle steel plate is a steel product that undergoes cold rolling after hot rolling, with a thickness falling between that of thin sheets and thick plates. This cold rolling process enhances the steel's surface finish, dimensional precision, and mechanical properties such as strength and hardness. Compared to hot-rolled middle plate, it offers a smoother surface, tighter tolerances, and improved strength. It finds applications in industries requiring these enhanced properties, such as machinery manufacturing, structural components, and certain automotive parts. The industry trend for cold-rolled middle steel plate is influenced by several factors. Firstly, there's a growing demand for higher strength and lighter weight materials across various sectors, particularly in manufacturing and construction. This drives the need for advanced cold-rolling techniques and the development of high-strength, low-alloy steels (HSLA) that can be cold-rolled into middle plate. Secondly, increasing emphasis on precision and quality in manufacturing is pushing demand for cold-rolled middle plate with tighter tolerances and superior surface finishes. This necessitates investments in advanced rolling mills and quality control processes. Thirdly, sustainability is becoming a key concern, with increasing focus on reducing energy consumption and carbon emissions in steel production. This is leading to the adoption of more energy-efficient cold-rolling processes and the use of recycled steel. Finally, specific applications are driving niche trends. For example, the growth of renewable energy infrastructure may increase demand for specific grades of cold-rolled middle plate used in wind turbine towers or solar panel structures. These trends point towards a future where cold-rolled middle plate will need to meet increasingly stringent performance, quality, and sustainability requirements.

The global Cold Rolling Middle Steel Plate market size was estimated at USD 10890.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
