Abstracts

Cold Spray Additive Manufacturing (CSAM) Service is a specialized manufacturing process that uses a supersonic gas jet to accelerate metal or composite powder particles, which then bond upon impact with a substrate to form a dense, solid layer. Unlike traditional additive manufacturing techniques that rely on melting or sintering, CSAM operates at lower temperatures, preserving the material's original properties while minimizing thermal distortion and oxidation. This technology is widely used for repairing, coating, and fabricating complex metal components in industries such as aerospace, defense, and energy, offering benefits like high deposition rates, reduced material waste, and enhanced mechanical properties.

The global Cold Spray Additive Manufacturing market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
