Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cold Syrup competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Cold Syrup reached approximately 78 million units, with an average market price of about USD 9 per unit, an annual production capacity of roughly 100 million units, and an industry-average gross margin of approximately 40%. Cold Syrup is an oral liquid pharmaceutical formulation, marketed as an over-the-counter (OTC) or prescription medicine, designed to relieve symptoms associated with the common cold and upper respiratory tract infections. These symptoms typically include cough, sore throat, nasal congestion, runny nose, fever, and mild pain. Formulations may contain a single active ingredient or a multi-ingredient combination, commonly incorporating antipyretic?analgesics (e.g., acetaminophen), antihistamines, antitussives, expectorants, and decongestants. The syrup base improves palatability and patient compliance. Cold syrup is widely used by adults and children and represents a staple product category in pharmacies, outpatient clinics, and online OTC channels. The upstream of cold syrup consists mainly of API suppliers (antipyretic, antitussive, antihistamine, and decongestant actives), excipient suppliers (syrup bases, sweeteners, flavors, preservatives), and pharmaceutical packaging manufacturers (glass or PET bottles, dosing cups, labels). The midstream includes branded pharmaceutical companies and contract manufacturing organizations (CMOs) responsible for formulation, filling, quality control, and regulatory compliance. Downstream channels include retail and chain pharmacies, hospitals and primary healthcare institutions, and e-commerce platforms. End-user consumption is driven by patient demand and shows strong seasonality, with significantly higher volumes during autumn?winter and influenza seasons. Individual users typically consume one to two bottles per treatment

cycle, while households and pediatric use cases generate repeat purchases, making cold syrup a stable, high-turnover OTC category.

The global Cold Syrup market size was estimated at USD 702.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
