Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cold Water Deaeration System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cold Water Deaeration System is a specialized setup designed to remove dissolved oxygen from water at low temperatures, primarily for applications like beverage production where oxygen can affect taste and shelf life. In systems such as the GEA VARIDOX-C, water is sprayed into a deaeration column and passes through packed sections, where oxygen is removed and the water is then saturated with gases like carbon dioxide or nitrogen. Additional features may include a precarbonation option for blending with carbonated products, sensors for monitoring flow and oxygen levels, and an integrated CIP system for automated cleaning.

The global Cold Water Deaeration System market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Cold Water Deaeration System market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
