## Abstracts

A Collaborative Robot, often referred to as a "Cobot", is a type of industrial robot designed to work alongside humans in a shared workspace safely and efficiently. Unlike traditional industrial robots that typically operate in isolated areas behind safety barriers, cobots are specifically designed to collaborate with human workers without the need for extensive safety measures. Collaborative robot (Cobots) is a robot intended to physically interact with humans in a shared workspace. In addition, a collaborative robot is less bulky and much easier to operate than other equipment when loads between 50 and 100 kilos must be handled. This is in contrast with other robots, designed to operate autonomously or with limited guidance, which is what most industrial robots were up until the decade of the 2010s. Cobots can have many roles ? from autonomous robots capable of working together with humans in an office environment that can ask you for help, to industrial robots having their protective guards removed as they can react to a human presence under EN ISO 10218 or RSA BSR/T15.1. The continuous development in the automation industry is expected to boost the growth of the global collaborative robot market in the coming years. The safety of these robots has increased their demand in various end-user industries as they can perfectly work in tandem with the human workforce. Global key players of Collaborative Robot include Aubo (Beijing) Robotics, Dobot, Universal Robots, etc. The top three players hold a share over 55%. Asia-Pacific is the largest market, and has a share about 37%, followed by Europe and North America with share 33% and 28%, separately. In terms of product type, 5-10 kg is the largest segment, occupied for a share of 40%. In terms of application, Electronics has a share about 35 percent.

The global Collaborative Robot (Cobot) market size was estimated at USD 1020.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.80% during the forecast period.
