Report Overview

A Collaborative Robot, often referred to as a 'Cobot', is a type of industrial robot designed to work alongside humans in a shared workspace safely and efficiently. Unlike traditional industrial robots that typically operate in isolated areas behind safety barriers, cobots are specifically designed to collaborate with human workers without the need for extensive safety measures. Collaborative robot (Cobots) is a robot intended to physically interact with humans in a shared workspace. In addition, a collaborative robot is less bulky and much easier to operate than other equipment when loads between 50 and 100 kilos must be handled. This is in contrast with other robots, designed to operate autonomously or with limited guidance, which is what most industrial robots were up until the decade of the 2010s. Cobots can have many roles — from autonomous robots capable of working together with humans in an office environment that can ask you for help, to industrial robots having their protective guards removed as they can react to a human presence under EN ISO 10218 or RSA BSR/T15.1. The continuous development in the automation industry is expected to boost the growth of the global collaborative robot market in the coming years. The safety of these robots has increased their demand in various end-user industries as they can perfectly work in tandem with the human workforce.

The global Collaborative Robot (Cobot) market size was estimated at USD 953 million in 2023 and is projected to reach USD 2600.57 million by 2032, exhibiting a CAGR of 11.80% during the forecast period.

North America Collaborative Robot (Cobot) market size was estimated at USD 301.10 million in 2023, at a CAGR of 10.11% during the forecast period of 2024 through 2032.
