Abstracts

Collagen artificial casings are tubular, edible or inedible food-grade sheaths manufactured from animal-derived collagen (primarily from bovine or porcine hides and bones), used primarily in the production of sausages and other processed meat products to contain and shape the filling during processing and cooking. These casings are engineered to offer consistent sizing, mechanical strength, permeability control, and uniformity, making them a key alternative to natural casings in industrial meat processing due to their scalability, cost-effectiveness, and ability to meet specific functional requirements such as smoke permeability, shrinkage control, and peelability.

The global Collagen Artificial Casings market size was estimated at USD 280.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
