Report Overview:

Collagen casings are mainly produced from the collagen in beef or pig hides, and the bones and tendons. It can also be derived from poultry and fish. They have been made for more than 50 years and their share of the market has been increasing. Usually the cost to produce sausages in collagen is significantly lower than making sausages in gut because of higher production speeds and lower labor requirements. The collagen for artificial casings is processed extensively and, as a raw material, it is similar to bread dough prior to final production. It is then extruded through a die to the desired diameter, dried and shirred into short sticks up to 41 cm (16 in) long that contain as much as 50 m (160 ft) of casing. In a newer process, a form of dough is coextruded with the meat blend, and a coating is formed by treating the outside with a calcium solution to set the coating. The Collagen Casings industry can be broken down into several segments, Small Caliber Collagen Casings, Large Caliber Collagen Casings, etc.

The Global Collagen Casings Market Size was estimated at USD 572.76 million in 2023 and is projected to reach USD 724.72 million by 2029, exhibiting a CAGR of 4.00% during the forecast period.
