Abstracts

Collagen gel is a collagen-based gel-like substance commonly used in biomedical and bioengineering applications. Collagen is a structural protein that is one of the most abundant proteins in many organisms and has good biocompatibility and biodegradability. The formation of collagen gel is usually achieved through cross-linking or aggregation between collagen molecules, forming a three-dimensional network structure. This gel has a structure and biological properties similar to natural tissue, and is often used as a biomaterial scaffold, tissue engineering, drug delivery system, etc. Due to its biocompatibility and bioactivity, collagen gel has a wide range of applications in the medical field. The collagen gel market has shown strong growth momentum in recent years. This is mainly due to the characteristics of collagen that are closely related to skin youthfulness and wound repair, as well as its wide application in many fields such as skin care, medical beauty, and medical dressings. With the continuous advancement of industry technology, high-quality, highly bioactive collagen products such as recombinant collagen have gradually emerged, further promoting market expansion. In addition to basic collagen gel products, there are also specialized collagen gels designed for different skin types and needs, as well as composite collagen gels that combine other bioactive ingredients. The emergence of these products not only enriches the market choices, but also meets the growing personalized needs of consumers. To sum up, the collagen gel market has broad development prospects and huge market potential. With the continuous advancement of technology and the expansion of the market, this market is expected to become one of the important pillars of China's biomaterials field.

The global Collagen Gel market size was estimated at USD 2864.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
