### Report Overview

A biomaterial is any substance that has been engineered to interact with biological systems for a medical purpose - either a therapeutic (treat, augment, repair or replace a tissue function of the body) or a diagnostic one. As a science, biomaterials is about fifty years old. Hyaluronic acid (HA) is a substance which is naturally present in the human body with highest concentration in the eye and joints. It has wide applications in the field of osteoarthritis, eye surgery, plastic surgery, prevention of aging etc.

Geographically, North America holds a leading position with regards to collagen and HA-based biomaterials market followed by the European market. Some of the major factors responsible for the growth of this market in these regions are increasing prevalence of various diseases, development of new and technologically advanced products, use of single-injection visco supplement products, and increasing need of individuals to stay fit and healthy in their advancing years.
