Abstracts

A collision mitigation system (CMS) is an advanced driver assistance system (ADAS) that employs a combination of sensors—such as radar, lidar, and cameras—to detect imminent collision risks with vehicles, pedestrians, or other obstacles, and automatically intervenes through a series of escalating responses, including visual and auditory warnings, brake pre-charging, partial braking, and, if necessary, autonomous emergency braking (AEB) to reduce impact severity or avoid a crash entirely. The market for collision mitigation systems has experienced robust growth, driven by increasing regulatory mandates, rising consumer awareness of vehicle safety, and the integration of these systems as standard or optional features across both passenger and commercial vehicle segments. Key market players include established automotive suppliers such as Bosch, Continental, ZF, and Aptiv, alongside growing participation from tech firms specializing in AI and sensor technologies. Regional adoption varies, with Europe and North America leading due to stringent safety standards from organizations like Euro NCAP and IIHS, while Asia-Pacific shows rapid expansion fueled by high vehicle production volumes and increasing safety regulations in countries like China and Japan. Technological advancements, such as the fusion of sensor data and improvements in artificial intelligence for better object recognition, continue to enhance system reliability and functionality. Challenges include high system costs, especially for lidar-based solutions, and the need for extensive validation to ensure performance across diverse driving conditions. The market is also increasingly intertwined with the development of autonomous driving technologies, positioning CMS not only as a safety feature but as a foundational component for higher levels of vehicle automation. Future growth is expected to be supported by declining sensor costs, broader regulatory adoption worldwide, and consumer demand for enhanced safety as a key purchasing criterion.

The global Collision Mitigation System market size was estimated at USD 5426.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
