Abstracts

Colloidal graphite powder is a specialized lubricant and conductive material consisting of ultrafine graphite particles suspended in a liquid or dry medium, designed to form a thin, uniform, and adherent film when applied to surfaces. It is characterized by its high thermal stability, chemical inertness, and excellent electrical conductivity, making it suitable for applications requiring reduced friction, heat dissipation, or electrical continuity in environments where traditional oils or greases are impractical. The product is commonly used in high-temperature settings, such as in metallurgy, forging, and foundry operations, as well as in electrical contacts, locks, and assembly processes where its dry lubrication properties prevent dust accumulation and ensure smooth mechanical operation.

The global Colloidal Graphite Powder market size was estimated at USD 450.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Colloidal Graphite Powder market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
