Abstracts

Colloidal precious metals refer to suspensions of nanoscale particles of precious metals?primarily gold, silver, platinum, and palladium?dispersed in a liquid medium, typically water. These colloids are stabilized to prevent aggregation and are valued for their unique optical, electrical, catalytic, and purported bioactive properties. While colloidal silver has historically been marketed for health and antimicrobial applications, colloidal gold finds use in diagnostics, electronics, and nanotechnology; platinum and palladium colloids are primarily employed in industrial catalysis, sensing, and research. The market encompasses both consumer-facing wellness products and highly specialized industrial or scientific applications, with quality, particle size, concentration, and purity serving as critical differentiating factors.

The global Colloidal Precious Metal market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
