Report Overview:

Colloidal silicon dioxide is silicon dioxide particles suspended in a liquid. Liquids are denser than water and have been electrostatically stabilized to keep particles suspended in solution. Silica particles are also very small and do not have a large density. If the particles are too large, they will precipitate out of solution. If the silica particles are too small, they are difficult to stabilize in solution. Colloidal silicon dioxide can be used to enhance the motion of materials or increase surface friction and is increasingly used in chemical mechanical planarization (CMP) slurries as polishing agents in the electronics and semiconductor industries.

The Global Colloidal Silicon Dioxide Market Size was estimated at USD 1105.93 million in 2023 and is projected to reach USD 1586.62 million by 2029, exhibiting a CAGR of 6.20% during the forecast period.
